PROFILE

Operator-technologist and hands-on AI workflow designer who makes complex work visible, connects technical and business teams, and builds operating mechanisms that turn emerging technology into adopted outcomes. Direct experience includes agentic workflow patterns, human-in-the-loop design, escalation and recovery, process mapping, prototypes, data-informed operating systems, and cross-functional facilitation in high-consequence environments.

ROLE-ALIGNED CAPABILITIES

Agentic workflow design	Human oversight patterns
Journey and process mapping	Exception and recovery design
Cross-functional facilitation	Conversational interaction logic
Prototyping and testing	Operational metrics and learning loops

SELECTED EXPERIENCE

Vape-Jet - Director of Operations

2025-Present

- Lead AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.
- Work directly in the problem space: connecting factory, field, customer, and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training, and accountability.
- Design human review, escalation, root-cause, and feedback mechanisms in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating learning loops.

DudeWorth - Founder / AI and Automation Advisor

2017-Present

- Develop AI-readiness and opportunity frameworks that assess value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.
- Design agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation, and governance rails.
- Create prototypes and operating models that attach AI to work, decisions, adoption, and measurable categories such as cycle time, rework, completeness, traceability, and recurring quality or machine issues.

Amazon - Operations Management / Site Leader

2014-2018

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward operating environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms across safety, quality, customer experience, and team engagement.
- Contributed to logistics innovation through Prime Air research and Amazon Flex geolocation concepts, translating frontline friction into testable product and operating ideas.

Cardinal Building Products - Regional Director

2021-2023

- Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts, connecting customer experience with operational feasibility.

ZeusVu - Chief Pilot, Autonomous Systems and Aerial Data Operations

2018-2022

- Led regulated drone operations across medical, energy, logistics, real-estate, and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence.
- Designed medical drone delivery and chain-of-custody concepts connecting technology, risk, stakeholders, and governed execution.

Design thesis for ServiceLink: every consequential AI action should make intent, evidence, authority, exception conditions, human handoff, and recovery legible enough to trust and improve.

COMPLEMENTARY EXPERIENCE

Compunetics - Director of Operations and Engineering Management

2000-2013

- Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced-electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures, and process controls; collaborated with high-consequence customers and partners including DoD, CERN, Intel, and AMD.
- Published industry articles, delivered technical talks, and participated in the HyperTransport Consortium.

EDUCATION & CREDENTIALS

University of Pittsburgh

Bachelor of Science

Academic grounding includes materials science, physical chemistry, and biology-related studies.

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

TECHNICAL & DESIGN TOOLKIT

Agentic AI, LLM workflows, RAG patterns, human-in-the-loop design, prompt and context design, workflow and journey mapping, process diagrams, prototypes, JavaScript, Python, SQL, TensorFlow, Tableau, ERP/Odoo workflows, Jira, Confluence, HubSpot, Slack, GIS and mapping workflows.

OPERATING APPROACH

Start with the real work and strongest exception. Make decision rights explicit. Prototype the interaction and the recovery path. Test with users and operators. Instrument behavior and operating outcomes. Preserve a clear record of what changed and why.

ADDITIONAL LEADERSHIP

Enviro Social Capital - Chairman of the Board

2014-2017

Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance, and civic transformation; helped shape and evaluate a \$200 million Social Impact Bond feasibility concept for Pittsburgh sewage and green-infrastructure improvement.

IEEE - CMPT and EDS Pittsburgh Chapter Chair

2012-2016

Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing, and emerging technology; organized conferences, seminars, business tours, and technical programming.

DIRECT PRODUCT DESIGN PRACTICE

Workflow discovery and opportunity framing

Map work, journeys, dependencies, handoffs, and strongest exceptions; assess AI opportunities against value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.

Agent behavior and human authority

Define structured context, retrieval, tool boundaries, decision rights, human review, escalation, recovery, and decision records so intelligent workflows remain understandable and governable.

Prototyping and cross-functional alignment

Create process diagrams, interaction flows, working web prototypes, operating models, and executive-ready narratives that make ambiguous technical and business choices concrete.

Evaluation and learning loops

Use user and operator feedback plus operating measures such as cycle time, rework, completeness, traceability, and recurring issue patterns to test behavior and improve the workflow.

Transparent gap: I have not held a conventional Senior Product Designer title inside mortgage technology. My case rests on direct, transferable evidence in workflow design, AI-assisted systems, human oversight, facilitation, high-consequence operations, prototyping, and adoption - not on title inflation.
